

FAMILY HEALTH ADMINISTRATION PLATFORM

Your family health information, organised and accessible when it matters.

MJW GROUP ECOSYSTEM | BRANDING DOCUMENT

1. Brand Summary

Platform: Vaulta

Product descriptor: Family Health

One-line definition: Secure platform for managing family medical records, emergency contacts, care plans, prescriptions, documents, and health administration for real households.

Strategic positioning: Built for family members who coordinate health records, emergencies, chronic-care admin, appointments, documentation, and practical caregiving information.

Primary audience: Families, caregivers, adult children supporting parents, households managing chronic conditions, emergency contacts, and care coordination.

Commercial role inside MJW GROUP: standalone product application inside the MJW ecosystem. The product must carry its own brand identity while still feeling owned by one disciplined parent group.

2. Brand Architecture

Master owner: MJW GROUP owns the ecosystem and may appear in footers, settings, legal notices, and investor/company-level materials.

Product brand: Vaulta is the customer-facing application brand. Users should feel they are logging into Vaulta, not into a generic MJW dashboard.

Application model: standalone web app plus mobile application. The visual system must therefore work as a dashboard interface, mobile home screen icon, favicon, app store asset, PDF export header, and email notification header.

3. Logo System

 Primary logo - dark interface use	 Light-background logo
 App / favicon glyph	 Small favicon glyph

Logo usage rules: keep clear space equal to the icon width around the logo; do not stretch, rotate, add shadows outside the approved asset, recolour randomly, or place the primary white wordmark on a light surface. Use the glyph alone only for app icons, favicons, loading states, collapsed navigation, and social avatars.

4. Colour System

Swatch	Token	HEX	Use
	Primary	#8E4DFF	Core brand accent, buttons, active states, key charts
	Primary highlight	#C084FC	Gradients, hover states, selected cards
	Accent deep	#5B21B6	Secondary accents, outlines, brand depth
	Background	#0B0614	Main application shell and login background
	Surface	#151022	Dashboard cards and forms

	Surface raised	#211630	Modal surfaces, panels and mobile cards
	Border	#3B2557	Card borders and divider lines
	Text	#F8FAFC	Primary text on dark UI
	Muted text	#9CA3AF	Secondary labels and helper text

5. Typography and UI Style

Recommended interface font: Inter, Manrope, or Aptos for product UI. These are clean, readable, and appropriate for dashboard-heavy environments.

Recommended display font: Space Grotesk, Sora, or Montserrat for landing-page headings and major section titles. Use sparingly inside dashboards.

Typography hierarchy: page title 32-40 px; dashboard section title 20-24 px; card title 14-16 px; body 14-16 px; labels 11-13 px; mobile minimum body size 14 px.

UI character: dark, disciplined, premium SaaS, card-based dashboards, controlled accent colour, visible hierarchy, strong empty states, and export-ready reporting surfaces.

6. Voice, Messaging and Content Rules

Voice rules

- Calm and reassuring
- Practical family administration
- Privacy-first
- Clear emergency language
- No clinical overclaiming

Approved tagline options

- Family Health, Safely Organised.
- Secure Records. Clear Care.
- Always Accessible When It Matters.

Avoid

- Hospital-style cold visuals
- Wellness influencer language
- Medical diagnosis claims
- Overly soft pastel branding

7. Product Experience Requirements

Primary modules to reflect in platform navigation:

- Family profiles
- Medical records
- Emergency contacts
- Care plans
- Medication list
- Appointment notes
- Document vault
- Doctor contacts
- Allergy alerts
- Exportable emergency summary

Desktop rules: use a persistent sidebar, compact top bar, modular cards, filters, export actions, and clear status chips. Avoid over-decorated hero sections inside the operating dashboard.

Mobile rules: use the glyph as app icon, bottom navigation for main actions, large tap targets, simplified cards, offline-friendly capture where possible, and immediate access to the most urgent records/actions.

PDF/report rules: use the light-background logo for exported documents, include product name, building/client/family/business context, source date, generated date, and action owner where relevant.

8. Developer Branding Scope

Replace the current product branding with the Vaulta brand system. Implement all brand tokens in a single theme file and connect them to the application shell, login page, loading screen, sidebar, cards, buttons, modals, tables, charts, PDF/export headers, emails, favicon, app manifest, mobile app splash screen, and app icon assets.

Required token set:

brand.name = "Vaulta"

brand.descriptor = "Family Health"

brand.owner = "MJW GROUP"

brand.primary = "#8E4DFF"

brand.primaryHighlight = "#C084FC"

brand.accentDeep = "#5B21B6"

brand.background = "#0B0614"

brand.surface = "#151022"

brand.surfaceRaised = "#211630"

brand.border = "#3B2557"

brand.text = "#F8FAFC"

brand.textMuted = "#9CA3AF"

Use Vaulta branding across the family health platform, mobile emergency screens, document vault, care profile pages, app manifest, favicon, shareable emergency PDF, and platform footer. MJW GROUP appears as owner mark only.

Do not hard-code colours across components. Do not use MJW Signal, MJW Portfolio Signal, or any previous platform name inside this product unless it is in legal ownership copy. Update screenshots, meta titles, Open Graph images, app manifest names, browser title, route labels, and placeholder content.

9. Asset Checklist

- Primary transparent PNG and SVG logo
- Light-background transparent PNG and SVG logo
- App icon / favicon glyph PNG and SVG
- Login screen using product-specific positioning copy
- Mobile splash screen and app manifest name
- PDF/export header template
- Email notification header/footer
- Landing page product card inside MJW GROUP site
- Legal/footer copy showing MJW GROUP as owner
- Final trademark/domain availability check before public launch

10. Decision Notes / Missing Checks

Trademark and domain availability have not been checked. This document is a branding and implementation scope, not a legal clearance report.

Final app store icons should be exported with a solid background version for iOS and Android submission, even though the supplied glyph files are transparent for design flexibility.

Any platform-specific compliance copy must be reviewed separately. Vaulta must not imply medical diagnosis or emergency response services. Ledgera must not imply tax advice unless reviewed by a qualified professional. Obstrata must align with lease, POPIA and client reporting requirements.
